

Unifying Global Operations: NetSuite ERP Implementation Across 19 Countries

THE CHALLENGE

- A legacy PeopleSoft environment was limiting their global operational efficiency
- They wanted a NetSuite rollout across 19 countries each with regional regulatory differences
- They had complex multi-currency and multi-subsidiary financial structures requiring unification
- There were significant discrepancies in business processes across regions
- They needed to integrate a home-grown operational system with NetSuite
- Complex multi-level and multi-dimensional approval workflow requirements

OUR SOLUTION

NetSuite Leading Practices Implementation

- Configured system to reduce complexity and enhance scalability
- Implemented unified ERP platform across all 19 countries

Custom API-Based Integration

- Built seamless integration between legacy operational system and NetSuite
- Enabled data exchange for projects, invoicing, and expense management

Tailored Customizations

- Developed customizations for unique business processes
- Built user-friendly custom approval workflow to handle multi-level and multi-dimensional approval requirements eliminating manual email processes. The workflow is configurable for ongoing changes.

IMPACT

01

Unified operations across 19 countries with enhanced consistency and alignment through single ERP platform

02

Streamlined financials and multi-currency management with significantly reduced manual work and eliminated data silos

03

- **Improved process efficiency and reduced errors with automated workflows replacing manual email approvals**
- **30% reduction in time spent by audit team to meet SOX compliance requirements**
